BRAND GUIDELINES

Version 1.0 · May 2026 · lyraonline.ai

CONTENTS

01	Brand Overview	Our story, mission, and identity in brief
02	Logo System	Primary mark, usage rules, clear space, and prohibited uses
03	Colour Palette	Primary, secondary, and status colours with usage guidance
04	Typography	Type system — display, UI, and mono families
05	Voice & Tone	How LYRA speaks — brand personality and writing standards
06	Digital UI Standards	Spacing, motion, icons, and component principles
07	Brand Applications	Email signatures, social assets, and presentation decks
08	What Not To Do	Common misuses and how to avoid them

What LYRA is

LYRA is an AI-powered social media intelligence platform. We don't just schedule content — we actively converse with audiences on behalf of our clients, 24 hours a day, with intelligence that understands each brand's unique voice.

Built for agencies, freelancers, and ambitious SMBs, LYRA combines deep brand intelligence with configurable AI autonomy to do something no competitor does: respond to comments and reviews automatically, on-brand, at scale.

Brand positioning

WHAT WE DO	HOW WE DO IT	WHY IT MATTERS
Social media intelligence — scheduling, publishing, and AI-driven engagement across every major platform.	A brand intelligence engine learns each client's voice from their website, social history, and brand guidelines. The AI then writes and responds — always on-brand.	No platform currently responds to comments autonomously. LYRA is the first. That's not a feature — it's a category.

Brand personality

LYRA is the tool that makes agencies look extraordinary. It is not friendly, not casual, not playful. It is precise, intelligent, and quietly confident. It speaks in complete sentences. It never shouts.

INTELLIGENT	PRECISE	CONFIDENT	RESTRAINED
The AI behind LYRA is sophisticated. The interface reflects that — no clutter, no noise.	Every feature is intentional. Every word in our copy earns its place.	We don't need to shout. The product speaks for itself.	Less is always more. We add only what is necessary.

Name & domain

NAME	DOMAIN	PRONUNCIATION	MEANING
LYRA	lyraonline.ai	LY-rah	A constellation. A signal transmitted across vast distances. Always present, always reaching.

The origin of the name

Lyra is one of the smallest constellations in the night sky — but one of the most recognisable. It contains Vega, the fifth-brightest star in the entire sky and one of the three stars that form the Summer Triangle. For thousands of years, navigators used Vega to find true north. Ancient astronomers in Mesopotamia, Greece, and Persia all charted it independently, drawn to the same bright signal in the dark.

In Greek mythology, Lyra is the lyre of Orpheus — the instrument so beautiful that it could move rivers, calm wild animals, and charm even the gods of the underworld. When Orpheus died, Zeus placed his lyre among the stars so its music would never be lost.

The name LYRA was chosen because it captures exactly what this platform does: it transmits a signal — a brand's voice, tone, and intelligence — across every channel, at every hour, reaching audiences that a human team alone never could. Like Vega, it is always present in the sky. Like the lyre of Orpheus, it speaks with a voice that is distinctly its own.

A signal that is always there. A voice that never goes quiet. That is LYRA.

The mark

The LYRA identity is a framed initial mark paired with the wordmark. The framed L is a platinum square border containing the letterform — precise, geometric, and ownable. The wordmark follows in ultralight weight with generous letter-spacing.

PRIMARY — On dark background

REVERSED — On light background

Logo elements

FRAMED INITIAL	WORDMARK	COMBINED MARK
The square-bordered L serves as the standalone app icon, favicon, and avatar. The border is always 1px platinum on near-black. The L is set in Helvetica Light.	LYRA set in DM Sans Light, tracking +250. The letters are set in all capitals. Never bold. Never condensed. Never stretched.	The framed L followed by YRA in ultralight. The gap between the frame and the Y is exactly 12px at standard digital sizes. This proportion must be maintained.

Clear space & minimum size

Always maintain clear space around the logo equal to the height of the framed L mark. This space must remain free of all other visual elements.

MINIMUM DIGITAL SIZE	MINIMUM PRINT SIZE	CLEAR SPACE	FAVICON SIZE
120px wide (full mark) 32px wide (icon only)	30mm wide (full mark) 8mm wide (icon only)	= height of framed L box on all four sides	16×16px, 32×32px, 192×192px Framed L only — no wordmark

Logo — prohibited uses

Never do the following with the LYRA logo:

✗ Recolour the logo

The logo is always platinum on near-black, or near-black on white. Never use brand colours, gradients, or photography as fills.

✗ Rotate or skew

The mark is always presented horizontally at 0°. No rotation, no perspective transforms.

✗ Add effects

No drop shadows, glows, outlines, or embossing. The mark is clean and flat at all times.

✗ Change the typeface

YRA is always DM Sans Light. Never substitute another typeface.

✗ Use on busy backgrounds

The logo requires a solid near-black or solid white background. Never place on photography, gradients, or patterns.

✗ Stretch or distort

Scale the logo proportionally only. Never adjust width and height independently.

✗ Remove the frame

The square border around the L is integral to the mark. It must never appear without it.

✗ Use the wordmark without the framed L

When using the wordmark, always include the framed L. The two elements are inseparable except at favicon size.

Colour system

LYRA's colour world is near-monochromatic. Near-black backgrounds, platinum text, surgical white space, and subtle metallic accents. Colour is used with extreme restraint — every chromatic element earns its place.

BACKGROUND COLOURS

			
Background Primary #080808 All authenticated pages	Background Secondary #0f0f0f Cards and panels	Background Tertiary #141414 Elevated surfaces	Background Hover #1a1a1a Hover states

BORDER COLOURS

		
Border Subtle #222222 Card and panel borders	Border Mid #333333 Dividers and emphasis	Border Strong #444444 Active elements

TEXT & ACCENT COLOURS

		
Text Primary #e2e2e2 All primary UI text	Text Secondary #888888 Labels and metadata	Text Tertiary #555555 Muted / disabled
		
Platinum Accent #d8d8d8 CTAs and active states	White #f4f4f2 White moments only	Silver #aaaaaa Mid-level accent

STATUS COLOURS

**Status Success**

#4ade80

Positive states (desaturated)

**Status Error**

#f87171

Error and danger states

**Status Warning**

#fbbf24

Warning and caution states

**Status Info**

#60a5fa

Informational states

Colour usage principles

- Restraint above all

Colour is used sparingly. The near-black background is the dominant presence — platinum and white accents punctuate, never overwhelm.

- Never pure black or pure white

Pure black (#000000) and pure white (#ffffff) are not part of the LYRA palette. Use near-black (#080808) and off-white (#f4f4f2) instead.

- Status colours at reduced opacity

When using status colours in backgrounds, apply at 10–15% opacity on near-black to maintain the dark aesthetic.

- No gradients in the logo

The LYRA mark is always flat. No gradients anywhere in the identity system.

- No full-palette moments

Never use more than two accent colours in any single layout. Status colours may appear alongside primary colours only.

- Tailwind tokens mandatory in code

In all digital implementations, always use the Tailwind token names (bg-background-primary, text-text-secondary, etc.) — never hardcode hex values.

Type system

LYRA uses three typefaces. Each has a precise purpose. They must never be substituted, mixed, or used outside their designated roles.

FAMILY	ROLE	WEIGHTS	USE CASES
DM Sans	UI / Interface	Light 300 Regular 400 Medium 500	All UI text: labels, buttons, body copy, navigation, form fields, metadata. This is the workhorse — used for everything in the product interface.
Instrument Serif	Display / Headings	Regular 400 Italic 400i	Large display headings only: page titles, hero sections, marketing moments, section dividers. Never for body copy or UI text.
Geist Mono	Data / Monospace	Regular 400	All data values: metrics, counts, IDs, timestamps, code snippets, pricing, analytics figures. Signals precision and technical confidence.

Type scale — digital

	<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'NAME' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='NAME', textColor=Color(.333333,333333,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'WEIGHT' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='WEIGHT', textColor=Color(.333333,333333,333333,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'LINE HEIGHT' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='LINE HEIGHT', textColor=Color(.333333,333333,333333,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph ('caseSensitive': 1 'encoding': 'utf8' 'text': 'TRACKING' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='TRACKING', textColor=Color(.333333,333333,333333,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	
Display	32–48px	Instrument Serif 400	1.2	+0	Page titles, hero headings
Heading 1	24px	DM Sans 500	1.3	+0	Section headings
Heading 2	18px	DM Sans 500	1.4	+0	Sub-section headings
Heading 3	14px	DM Sans 500	1.4	+0	Card titles, labels
Body	14px	DM Sans 400	1.6	+0	All body copy
Small	12px	DM Sans 400	1.5	+0	Captions, hints
Label	11px	DM Sans 500	1.2	+0.1em	UI labels, uppercase only
Metric	20–32px	Geist Mono 400	1.2	+0	Data values, counters
Code	13px	Geist Mono 400	1.5	+0	Code, IDs, tokens

Typography rules

- Never use Inter, Roboto, or Arial

These are generic system fonts. LYRA's typography must always use DM Sans (UI), Instrument Serif (display), or Geist Mono (data). Arial is a fallback for environments where DM Sans cannot load — it should never appear in designed materials.

- **Uppercase labels require tracking**

Whenever text is rendered in all capitals (labels, section markers, status text), apply letter-spacing of at least 0.1em. Never set uppercase text at default tracking.

- **No bold in body copy**

DM Sans Medium (500) is used for emphasis within UI — not Bold (700). Bold weight feels heavy and aggressive against the near-black background.

- **Metrics always Geist Mono**

Any number that represents data — follower counts, engagement rates, post metrics, pricing — must be set in Geist Mono. This is non-negotiable.

- **Instrument Serif sparingly**

Display type is used for moments of impact only. A page should have at most one Instrument Serif heading. Never use it for UI elements.

- **Minimum body size 12px**

No UI text may be smaller than 12px. Caption text at 12px must achieve 4.5:1 contrast against its background (WCAG AA).

How LYRA speaks

LYRA's voice is the same across every touchpoint — product copy, marketing, error messages, email, and social. It is precise without being cold, intelligent without being arrogant, and direct without being blunt.

LYRA IS	LYRA IS NOT
Precise — every word has a purpose	Verbose — never padding to fill space
Confident — states things, doesn't hedge	Arrogant — never condescending to the user
Intelligent — respects the reader's knowledge	Jargon-heavy — clarity always wins over complexity
Warm — genuinely cares about outcomes	Emotional — never over-expresses or performs enthusiasm
Direct — gets to the point immediately	Blunt — always maintains respect and consideration
Calm — never reactive, never urgent without reason	Alarming — never uses fear or urgency as a default

Writing principles

- Lead with the outcome, not the feature

Don't write "LYRA's Brand Intelligence Engine analyses your client's website." Write "Your AI learns your client's voice — so every post sounds exactly like them."

- Use short sentences for impact

One idea per sentence. If a sentence has two clauses, consider splitting it. Short sentences signal confidence. Long sentences signal uncertainty.

- Active voice only

LYRA does things — it doesn't have things done to it. "The AI drafted three responses" not "Three responses were drafted by the AI."

- No exclamation marks in product copy

Exclamation marks are for marketing emails and onboarding — used sparingly even there. Never in error messages, tooltips, or interface labels. Confidence doesn't shout.

- Numbers over words where possible

"Manage 15 clients" not "Manage a large number of clients." "Saved 3 hours this week" not "Saved significant time this week."

- Never apologise for limitations — explain them

Not "Sorry, we can't do that yet." Write "TikTok comment responses are coming in Phase 2 — currently in development."

Copy examples

BUTTON LABELS

✓ Schedule post	✗ Click here to schedule your post
✓ Generate caption	✗ Use AI to generate a caption for me
✓ Connect account	✗ Start connecting your social media account

ERROR MESSAGES

✓ Instagram connection expired. Reconnect to continue posting.	✗ Oops! Something went wrong with your Instagram. Please try again!
✓ 30 AI response drafts used this month. Upgrade to Pro for unlimited.	✗ You've hit your limit! Upgrade now to keep using this feature!

ONBOARDING COPY

✓ LYRA is building your brand profile. This takes about 2 minutes.	✗ Please wait while our amazing AI learns everything about your brand!
--	--

Interface principles

The LYRA product interface is built on a single principle: every pixel earns its place. The near-black canvas, platinum hierarchy, and surgical whitespace are not decoration — they are the product.

Spacing system

All spacing uses a 4px base unit. Only multiples of 4 are permitted.

<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'TOKEN' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='TOKEN', textColor=Color(.333333,.333333,.333333,1), us_lines=[])]) 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'VALUE' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='VALUE', textColor=Color(.333333,.333333,.333333,1), us_lines=[])]) 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph ('caseSensitive': 1 'encoding': : 'utf8' 'text': 'PX' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='PX', textColor=Color(.333333,.333333,.333333,1), us_lines=[])]) 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'USE' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='USE', textColor=Color(.333333,.333333,.333333,1), us_lines=[])]) 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>
spacing-1	0.25rem	4px	Micro gaps — icon to label, tag padding
spacing-2	0.5rem	8px	Tight grouping — related elements
spacing-3	0.75rem	12px	Compact layout — dense data tables
spacing-4	1rem	16px	Standard — default component internal padding
spacing-5	1.25rem	20px	Comfortable — card padding
spacing-6	1.5rem	24px	Generous — section spacing

spacing-8	2rem	32px	Spacious — major section breaks
spacing-12	3rem	48px	Hero spacing — large section dividers
spacing-16	4rem	64px	Maximum — page-level breathing room

Border radius

Consistent radius creates visual coherence. Never mix radius values within a component type.

<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'TOKEN' 'frags': [ParaFrag(__tag__='p ara', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='TOKEN', textColor=Color(.333333,.333333,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph('caseSensitive' : 1 'encoding': 'utf8' 'text': 'VALUE' 'frags': [ParaFrag(__tag__= ='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='VALUE', textColor=Color(.333333,.333333,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'USE' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='USE', textColor=Color(.333333,.333333,.333333,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>
radius-sm	6px	Badges, tags, chips, inline code
radius-md	10px	Input fields, small cards, tooltips
radius-lg	14px	Cards, panels, dropdowns
radius-xl	20px	Modal dialogs, sheets, large containers
radius-full	9999px	Pills, avatar images, toggle switches

Motion & animation

<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'PROPERTY' 'frags': [Para aFrag(__tag__='para', bold=1, fontName='Helv etica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='PROPERTY', textC olor=Color(.333333,.3333 33,.333333,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'VALUE' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='VALUE', textColor=Color(.333333,.333333,.333333,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'USE' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='USE', textColor=Color(.333333,.333333,.333333,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>
Duration — fast	150ms	Hover states, colour transitions
Duration — standard	200ms	Modal open/close, page transitions, tooltips
Duration — slow	300ms	Sidebar collapse, drawer open, skeleton reveal
Easing	cubic-bezier(0.16, 1, 0.3, 1)	All transitions — spring-like, never linear
Page entry	fadeIn + slideUp (8px → 0)	200ms — all page-level content
Modal open	scaleIn (0.96 → 1) + fade	200ms — all dialog/sheet content
Sidebar collapse	width animation	250ms via Framer Motion
Skeleton loaders	shimmer keyframe	All data-loading states — never spinners

Icons

LYRA uses Lucide React as its exclusive icon set. No other icon libraries. No emoji used as icons under any circumstances.

· Lucide only

One icon library, consistently applied. Lucide icons are clean, geometric, and work perfectly at 16px on dark backgrounds.

· strokeWidth 1.5 as default

All icons use strokeWidth 1.5. Active/selected states use strokeWidth 2. Never strokeWidth 1 (too thin) or 2.5+ (too heavy).

· Size 16px for UI

Standard UI icons are 16px. Navigation icons are 16px. Feature icons in empty states can use 24px. Display/marketing icons can reach 48px.

· Never emoji as icons

Emoji are not icons. They are used only in user-generated content, never in product UI, never in marketing materials produced by LYRA.

· Icon-only buttons require ARIA labels

Applying the brand

These standards apply to all LYRA-produced materials — digital product, marketing, sales collateral, and communications.

Email signature

The standard LYRA email signature format:

FORMAT	EXAMPLE
Name — bold, DM Sans Medium, 12pt, #e2e2e2 Title — DM Sans Regular, 11pt, #888888 Divider — thin rule, #333333 LYRA — tracking +4, 9pt, #888888 lyraonline.ai — 9pt, #555555 No headshots. No banners. No quotes.	Jess Williams Account Director — LYRA lyraonline.ai

Social media presence

LYRA's own social media presence must embody the brand voice and aesthetic.

<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'CHANNEL' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='CHANNEL', textColor=Color(.333333,.333333,.333333,1), us_lines=[]) 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'AVATAR' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='AVATAR', textColor=Color(.333333,.333333,.333333,1), us_lines=[]) 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'HANDLE' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='HANDLE', textColor=Color(.333333,.333333,.333333,1), us_lines=[]) 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>	<pre>Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'TONE' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=7, greek=0, italic=0, link=[], rise=0, text='TONE', textColor=Color(.333333,.333333,.333333,1), us_lines=[]) 'style': 'bulletText': None 'debug': 0) #Paragraph</pre>
LinkedIn	Framed L mark — platinum on near-black	@lyraonline	Professional, insightful. Agency-focused content. Feature updates, product intelligence.

Instagram	Framed L mark — platinum on near-black	@lyraonline	Premium visual content. Product UI shots, motion clips, brand moments.
X (Twitter)	Framed L mark — platinum on near-black	@lyraonline	Precise, opinionated. Industry takes, product announcements, social media intelligence insights.
TikTok	Framed L mark — platinum on near-black	@lyraonline	Product demonstrations, behind-the-scenes AI capability showcases.

Presentation decks

- Dark background mandatory

All LYRA presentations use the near-black (#080808) background. Never present on white or light backgrounds.

- One idea per slide

LYRA decks are sparse. If a slide has more than one key point, split it. Whitespace is not wasted space.

- Data in Geist Mono

Any metric, count, or number on a slide is set in the monospace font equivalent available in Keynote/PowerPoint.

- No stock photography

LYRA decks do not use stock imagery. Use product screenshots, data visualisations, or abstract geometric compositions in brand colours.

- Transitions: fade only

Slide transitions are fade at 200ms. No dissolves, wipes, or kinetic transitions. Motion is reserved for animated data reveals.

Common misuses

These are the most frequent ways the LYRA brand identity is compromised. Every team member and external partner working with the LYRA brand must know these.

VISUAL IDENTITY

✗ Using white backgrounds in the product UI

The authenticated app is always near-black. A white background signals an error in thinking, not a design choice.

✗ Hardcoding hex values in digital products

All colours must reference Tailwind tokens. Hardcoded hex values break consistency across themes and make future updates impossible.

✗ Adding purple gradients

Purple gradients are the single most common AI-SaaS cliché. LYRA does not use purple. LYRA does not use gradients in the product or logo.

✗ Mixing icon sets

Lucide is the only icon library. FontAwesome, Heroicons, Material Icons, and any others must never appear in LYRA products or materials.

✗ Using emoji as interface icons

Emoji appear only in user-generated content. Never in buttons, navigation, labels, or any part of the LYRA product interface.

TYPOGRAPHY

✗ Setting body copy in Instrument Serif

Instrument Serif is for display headings only. Setting paragraphs, labels, or UI copy in a serif typeface violates the design system.

✗ Using Inter, Roboto, or system fonts

These are placeholder fonts. If DM Sans is not loading correctly, that is a technical problem to be fixed — not an invitation to substitute.

✗ Setting data values in DM Sans

Numbers representing metrics, pricing, or counts must always use Geist Mono. DM Sans for data loses the precision signal that makes the product feel intelligent.

✗ Bold body copy

DM Sans Medium (500) is the maximum weight for emphasis. Bold (700) is too heavy against dark backgrounds and is never used in interface copy.

BRAND VOICE

✗ Using exclamation marks in error messages

"Something went wrong!" is wrong. "Connection failed. Check your internet and try again." is right.

✗ Apologising for product limitations

"Sorry, this feature isn't available yet" positions LYRA as apologetic. "This feature launches in Phase 2 — currently in development" is confident and factual.

X Writing in passive voice

"Your post was scheduled by LYRA" is passive. "LYRA scheduled your post" is active and direct.

X Over-explaining

LYRA copy assumes intelligence in the reader. If something can be said in six words, it must not be said in twelve.

When in doubt: subtract. The LYRA brand is defined as much by what is absent as by what is present. Remove before you add.

Questions about brand usage: contact the LYRA brand team at brand@lyraonline.ai
